PROFESSIONAL SUMMARY

Entry-level Full Stack Developer (MERN) with a Core Java and DSA foundation and training in system design (HLD and LLD). M.Sc. Computer Science student (GPA 3.7/4.0) and Top 1% performer in the Scaler Full Stack Specialization with 824 problems solved. Independently designed, built and deployed nine web projects, including a MERN ticket booking platform with three user roles and Razorpay payments, real-time apps using WebSockets and WebRTC, and AI features using Gemini and retrieval-augmented generation. Seeking an entry-level Full Stack Developer or Software Developer role.

TECHNICAL SKILLS

Languages: Core Java, JavaScript, Python, SQL, HTML5, CSS3
Computer Science: Data Structures and Algorithms, OOP, High Level Design (HLD), Low Level Design (LLD)
Frontend: React, Tailwind CSS, responsive web design, HTML5 Canvas
Backend: Node.js, Express, REST APIs, Socket.IO, WebSockets, WebRTC
Databases: MongoDB, SQL
AI and APIs: Gemini API, Retrieval-Augmented Generation (RAG), embeddings, TMDB API, WeatherAPI, Razorpay
Tools: Git, GitHub, Vercel, Render
Strengths: Self-directed learning, project ownership, consistency, problem solving

PROJECT EXPERIENCE

BookMyShow - Movie Ticket Booking Platform | React, Node.js, Express, MongoDB, Razorpay
Live on Vercel: book-my-show-seven-lyart.vercel.app

- Engineered a full-stack MERN app for booking movie tickets, with role-based access for Users, Partners and Admins.
- Added live seat selection, theatre and show management, and Razorpay payment checkout.

CineTrack - Movie Tracking App with AI Recommendations | React, Tailwind CSS, TMDB API, Gemini API
Live on Vercel: cinemafans.vercel.app

- Created an IMDb-style React app with five core features (watchlist, genre filters, rating sort, search, AI picks) using the TMDB API.
- Integrated the Gemini API to power AI-based movie recommendations.

DocChat - Chat with Your PDF (RAG) | Node.js, Gemini API, Embeddings, BM25
Live on Render: docchat-evbf.onrender.com

- Designed a retrieval-augmented generation pipeline: PDF text is chunked, embedded with Gemini, and top passages are retrieved to answer questions.
- Returned answers with clickable page citations, with a BM25 keyword-search fallback when no API key is available.

CollabBoard - Real-time Multiplayer Whiteboard | Node.js, Socket.IO, WebSockets, HTML5 Canvas
Live on Render: realtime-hub-cuf2.onrender.com/collabboard

- Launched a multiplayer whiteboard with live cursors, per-user undo, eraser, PNG export and shareable room links.
- Sent the full board state to late joiners and restored sync automatically after dropped connections.

MeetUp - WebRTC Video Calls | WebRTC, Socket.IO, STUN/TURN, Node.js
Live on Render: realtime-hub-cuf2.onrender.com/meetup

- Delivered peer-to-peer video meetings for up to 6 people with screen sharing, mic and camera controls, and in-call chat.
- Wrote a Socket.IO signaling server to relay SDP and ICE candidates so media flows directly between browsers.

Weather App, Currency Converter, Calculator and Garage Showcase | HTML, CSS, JavaScript, REST APIs
Source and demos: portfolio website

- Weather App: live city search via WeatherAPI (temperature, humidity, wind speed) with search history. Currency Converter: real-time multi-currency rates via exchange-rate APIs. Calculator with keyboard support. Garage gallery showcase.

EDUCATION

M.Sc. Computer Science - Woolf University (Scaler Neovarsity) | Expected January 2027
GPA: 3.7/4.0

Full Stack Specialization - Scaler | Ongoing
Top 1% performer. Completed HLD and LLD coursework. Profile: scaler.com/academy/profile/e57c8d46c05f

CERTIFICATIONS AND ACHIEVEMENTS

- Full-Stack LLD and Development 1 - Scaler Academy, Certificate of Excellence (February 2026)
- Ranked in the Top 1% of learners at Scaler
- Solved 824 problems on Scaler (Arrays 95, SQL 60+, DBMS 47, Trees 32, Dynamic Programming 29, Linked Lists 21, Graphs 20) with a 98.56% solve rate and a 658-day streak

LANGUAGES

English (Fluent), Hindi (Native), German (Conversational), Spanish (Conversational)
